

ADJUSTABLE PERFORMANCE FEATURES

1. Trigger travel adjustment

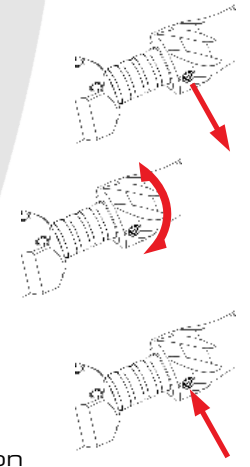

Featuring a 1 screw trigger travel adjustment. Pull trigger down to access adjustment screw. Turn clockwise to increase travel, counter clockwise to decrease travel.

IMPORTANT:
When setting trigger travel, always handle the bow safely. If the trigger travel is too light, it is possible for the release to go off early.

1

2. Length adjustment

1. Loosen the length adjust set screw.
2. Rotate the length adjust tube to lengthen/shorten the release.
3. Tighten the length adjust set screw once the desired length is reached.

Enables the barrel to rotate 360°, independent of the length adjustment.

FREE FLOATING ROTATION

The base rotates to minimize torque on the D-loop and self centers when the archer draws the bow.

FOLDBACK

Design moves release out of the way to glass, climb, rattle. Simply fold the barrel against the free floating rotation.

Allows archer to secure release to their wrist with one hand

*360° Rotation Lock

Tighten to eliminate 360° rotation and lock barrel in preferred position
