Code Black Select A&V [53] Manual Firmware Update Instructions

❖ Please read through the instructions before downloading the file. **This update can only be done** on a windows-based computer or a MAC.

STEP 1
- Insert the SD card into the computer!
- Format your SD card (Making sure it's completely empty)

STEP 2 -*Don't change the file name and only download the File once! If you download the file more than once and there's a number beside it (1),(2),etc. All will cause the update to be unsuccessful.**

(Using a Windows Computer)
- Select "Download Firmware" under Code Black Select.
- You'll then need to open your downloads folder. ⬇ Downloads You should see the ZIP file. *Left click & hold*, drag, and drop the file onto your main desktop.
- Once the ZIP file is on your desktop. 📁 Open the ZIP file Then *Left click & hold*, drag, and drop the file onto your desktop.
- Once on your desktop. You can then pull up your FILE Explorer 📁 Once opened, on the left side scroll to the bottom and click on the SDHC file 📷 SDHC (E:) or whichever your SD card is reading as.
- You'll then *Left click & hold*, drag, and drop the file from the desktop onto the SD card.
- **Please make sure this file is the only thing on the SD card.** 📄 Rom_Code_UML3.Bin 2 MB
- You can remove the SD card from your computer

(Using a MAC/Apple Computer)
- Select "Download Firmware" under Code Black Select.
- You'll Double click on the ZIP file to open it. It'll put the file into an unzipped folder on your Desktop.
- You'll need to open this folder and remove the 2 files (THEY CANNOT BE IN A FOLDER ON THE SD CARD)
- You can *Left click & hold*, drag, and drop each file individually to your Removeable Disk 💾 OR SD card icon. (Whichever it reads as**)
- **Please make sure this file is the only thing on the SD card.** 📄 Rom_Code_UML3.Bin 2 MB
- You can remove the SD card from your computer

STEP 3
- With camera in the **OFF** position. Insert the SD card.
- **Hold** the **right arrow** button while **simultaneously** putting the camera into **SETUP.**
- The camera will go through a few things and may restart.
- **Do not turn the camera's power off or press any buttons while the upgrade is in process!**
- Once the camera tries to connect to the network.(**NOT waiting on signal**)
- Press **MENU**, Arrow to the right to the **SYS/GEAR** Tab, arrow down to **DEFAULT**, Press **OK**, arrow to **YES** and Press **OK**. (This'll restore the camera back to factory settings.)
- Arrow **down** to **SOFTWARE VERSION** and see that it reads **MCU: V1053**. IF you see the correct firmware on the camera, proceed with the next steps.

IF you're updating more than 1 camera, turn the camera OFF and remove the Firmware SD card. You may start over with STEP 3 in the next device. IF not follow the instructions below.

STEP 4
- Make sure your camera is in SETUP and connected to the network.
- Press your SHOT button. (This captures the picture)
- Press the OK button. (This pulls the picture up)
- Hit MENU, Arrow down to send and Press OK

Wait for the send progress to hit 100% and check the App to see if the photo came through...If so, go ahead and turn your camera to the **ON** position and you should be good to go!

SD CARD SPECIFICATIONS- **Our cameras function with a Standard SD card, Class 10, between 8-32 GB.** *We ONLY recommend Sony, ONN, or Covert SD cards. *We don't recommend using San Disk brand, as they don't meet the requirements for the cameras. **Please, don't use any cards that say** Ultra/Ultra Plus, High Performance, Platinum, Extreme, Tough, HD/High definition, Plus, Elite, Pro, Image Mate, Edge, MICRO adapter, etc. These types of SD cards don't work well with our devices.
